GitHub | Portfolio

Information Technology graduate with hands-on experience in cybersecurity, endpoint remediation, networking, automation, and full-stack web development. Comfortable working with Python, web technologies, Linux/Windows environments, and SOC-style security workflows.

TECHNICAL SKILLS

Programming & Scripting: Python, JavaScript, PHP, C/C++

Web Development: React, Vite, HTML, CSS, Responsive UI Design, Frontend Development, Basic API Integration

Backend & APIs: FastAPI, REST APIs, Python Backend Development, Authentication Basics, API Documentation

Database & Storage: MySQL, PostgreSQL, CRUD Operations, Data Validation

Cybersecurity & SOC Tools: Wazuh, Vulnerability Remediation, Patch Management, Endpoint Orchestration, SOC Operations, Phishing Analysis, Security Automation, Audit Logging, Web Security Concepts

Networking & Systems: TCP/IP, LAN Communication, Socket Programming, WinRM, SSH, Linux, Windows Administration Basics

DevOps & Deployment: Docker, Docker Compose, GitHub Actions, Git, GitHub Pages, Release Management, Environment Configuration

EDUCATION

B. Tech in Information Technology
Ganpat University, Kherva

Jun 2023 to Jun 2026

Diploma in Information Technology
Ganpat University, Kherva

Jun 2020 to Jun 2023

Secondary School (10th Standard)
Chankya School, Ahmedabad

March 2020

EXPERIENCE

Cyber Security Intern at Turabit Private Sol.

Dec 2025- April 2026

Worked on cybersecurity, endpoint operations, vulnerability remediation, and SOC-style workflows. Gained hands-on exposure to Wazuh, patch management, automation, and security operations tooling. Built and tested security-focused features involving command execution, endpoint connectivity, and remediation evidence.

FEATURED PROJECTS

1. Click2Fix - Automated Patch Management & Cyber Operations Platform

Live: <https://helisudani0.github.io/click2fix/>

Built and launched Click2Fix, an advanced cyber operations platform for automated patch management, vulnerability remediation, endpoint orchestration, and SOC/IT operations. The platform turns security findings into controlled endpoint action with live execution visibility and audit-ready evidence.

2. Secure Vault - Security-Focused Vault Application

Live: <https://helisudani0.github.io/Secure-Vault/>

Developed Secure Vault, a security-focused web application designed to present secure storage and sensitive-data protection in a clean, user-friendly interface. The project demonstrates practical understanding of confidentiality, access-controlled workflows, and security-first product design.

3. Network Analyzer - Network Diagnostics & Intelligence Tool

Live: https://helisudani0.github.io/Network_Analyzer/

Built Network Analyzer, a network-focused tool designed to help users understand, inspect, and analyze network-related information through an accessible visual interface. The project highlights interest in networking, diagnostics, and cybersecurity visibility.

PROJECTS

1. SOC-Style Phishing Email Analyzer:

- Built a desktop tool to analyze real email (.eml) files. Extracted headers, URLs, and attachments to generate explainable phishing risk scores.
- Technologies: Python, Tkinter, Email Parsing.

2. Online Library Management System:

- Web-based system with database-backed CRUD operations for managing books and users.
- Technologies: HTML, CSS, PHP, MySQL, CRUD.

3. Inventory Management System:

- Web application for tracking stock, low-inventory alerts, and search/filter operations.
- Technologies: HTML, CSS, PHP, MySQL, Data Validation.
